

Your Water Bill only reflects these four digits

BLACK BOX

The wire that comes out of here connects to the black box outside your house where we read the water meter.

3. FLOWMETER

This triangle is only present on recently installed models. It spins counter clockwise when water flows through it. If the triangle is moving and your water is off, you have a leak

1. REGISTER

This register works like the odometer of your car. Each digit is 1 cubic foot of water used (7.5 gal). For billing purposes we only read 1st four digits from left.

2. NEEDLE

One complete revolution of this needle is one cubic foot of water (7.5 gal).
